Education

Punjab University College of Information and Technology(PUCIT) <i>Bachelor in Software Engineering (CGPA: 3.56 / 4.00)</i>	2020-2024 Lahore, Pakistan
• Relevant Coursework: Data Structures and Algorithms, Analysis of Algorithms, Object Oriented Programming, Database Management System, Web Engineering, Software requirement Engineering, Operating Systems, Computer Vision, Computer Networks, Machine Learning	
Government College University Lahore (GCU) <i>FSc (Pre-Engineering) (Marks 1042/1100)</i>	2018-2020 Lahore, Pakistan

Experience

i2c Inc. <i>Java/Spring Boot Developer</i>	July 2024 – Present Lahore, Pakistan
• Implemented changes to make the Cardholder 3 application CSP-compliance, ensuring adherence to security and compliance standards. • Developed a new Android module for receipt management, allowing users to upload receipts and receive automated reminders prior to due dates, improving user engagement and financial tracking. • Designed and implemented a transaction history module for Customer Service screens, enabling efficient retrieval and display of customer transaction data. • Implemented scheduled batch services using multithreading to execute time-based tasks efficiently and reliably in a financial system. • Built a complete automation test suite for the CManager application using Selenium and Gradle, covering regression, functional, and integration scenarios. • Integrated automated test execution into the CI/CD pipeline, generating detailed test reports (Allure) after each regression run to improve release confidence and reduce manual testing effort. • Worked in a collaborative Agile team, understanding and implementing system designs provided by architects, while following enterprise-grade development workflows and best practices.	
DevSaga <i>Mean Stack Developer</i>	Nov 2023 – June 2024 Lahore, Pakistan
• Developed admin panel in Angular for e-commerce and user app in Ionic for enhanced mobile experience. • Optimized data access in user app with SQLite, significantly improving performance and responsiveness. • Led backend development using Node.js and PostgreSQL, ensuring robust and scalable architecture. • Implemented Social Authentication and push notifications for enhanced security and user engagement. • Achieved data synchronization between Firebase and PostgreSQL databases, ensuring seamless data exchange.	
DevBlends <i>Web Developer</i>	July 2023 – Nov 2023 Lahore, Pakistan
• Gained expertise in state management in Flutter and implemented efficient state management solutions in projects. • Learned about Redis for caching • Designed UI for a new mobile app using Ionic framework, named My Real Experience, focusing on intuitive and engaging user interfaces.	

Projects

Spot Arena

| AngularJS, Ionic Framework, Node.js, PostgreSQL, Firebase, Cloud Firestore

|  Live on Play Store

- Developed a comprehensive mobile platform for booking sports courts and arenas across multiple sports including football, cricket, basketball, and tennis.
- Implemented secure user authentication using **Google**, **Facebook**, **OTP-based login**, and traditional username/password mechanisms.
- Integrated **Paymob** Pakistan payment gateway to enable secure online payments and booking confirmations.
- Built booking management features allowing users to view tickets, booking history, and present digital tickets at venues.

- Implemented a user review and rating system to improve service transparency and user engagement.

Realtime Food Truck (FYP) | *Flutter, Node.js, Express.js, PostgreSQL, Redis, Firebase, Sequelize*

- Designed the Entity-Relationship Diagram (ERD) for the PostgreSQL and developed RESTful APIs using Node.js
- Designed the user interface (UI) for the application using Figma and created the frontend application using Flutter
- Utilized Redis for caching to optimize data retrieval and improve application performance.
- Planned to implement real-time location tracking using Firebase snapshot, integrate Google Maps for location tracking and implement a review system for user feedback
- Planned to integrate a secure payment system to facilitate transactions within the application

Hostel Mess System | *Python, Flask, MongoDB, HTML, CSS, JavaScript, JQuery Bootstrap, Stripe*

- Student login functionality for accessing attendance, reserving mess, and making online challan payments
- Admin panel to manage student profiles, including features to add, delete, and view students.
- Menu updating functionality for the hostel mess and Polling system to select food in special days

Fitness Community App | *Flutter, Firebase, ZegoCloud, Workout/Nutrion Api's*

- Developed a fitness community app for professionals and enthusiasts to post about fitness-related content, sharing tips, workouts.
- Implemented video conferencing via ZegoCloud API for group workouts, workout scheduling, and chat engagement
- Integrated Nutrition API for precise calorie calculation of logged food items and Utilized graph visualization for tracking calorie intake
- Utilized device sensors for accurate daily step tracking.

Skills

Technical: JavaScript, TypeScript, Node.js, FireBase, SQL, Git, MySQL, NoSQL, PostgreSQL, Angular, Flask, Express.js, Dart, C++, Python, C, PyTorch, jQuery, Bootstrap, ASP.NET,

Interests: Investing, Cryptocurrency, Tabel tennis, Badminton, Rubik's Cube, Video games

Awards and Certificates

- **Runner-Up:** App Hackathon held by PUCon between inter-University.
- **Participant:** Competitive Programming Competition held by Code Fest
